There is a question about matching the GPS data set with the KR file. For example, for the GPS file AOG71FL and the AOKR71FL file, when looking at the AOG71FL file, it is found that there is a variable DHSYEAR, which is equal to 2015. However, the survey time of the research objects found in the AOKR71FL file is 2015 or 2016, so can I only match the research objects surveyed in 2015?
