Hello,

I'm having difficult matching the Burkina Faso MAD indicators to the estimates in the DHS report. I used the GitHub code to generate the estimates for 2010 and 2021. I limited the code to only children who responded to questions on feeding other than breastmilk (m55 in 2021 dataset). I've also double-checked all foods with the reports to include all country-specific reports. The 2010 estimates are much closer than the 2021. For 2010 I get 3.1% against 5.1%, while for 2021 it's 11.8% against 19% in StatCompiler. Could you please help me to be match the DHS figures.

Thank you.
