Hello,

I have been trying to find out whether folate data are available for the Rwanda DHS 2019-20. The Survey Characteristics Search suggests the folate data to be available. However, when I skimmed through the Supplemental Report for Micronutrients, I noticed that there is no table describing folate status, while there are tables for vitamin B12, iodine, ferritin, etc.

Could an expert kindly look into this and let me know:

- (i) are folate data available;
- (ii) if available, the variable name(s) that I should focus on; and
- (iii) the variable names for CRP, vitamin B12 and ferritin.

Many thanks!
