Following is a response from DHS staff member, Tom Pullum:

Before I check your construction of the food groups, I suggest that you replace this line:

```
egen sequence=seq() if b9==0 & b19>=6 & b19<=23 & m55<., by(v001 v002 v003)
```

with this line:

```
egen sequence=seq() if b9==0 & b19>=6 & b19<=23 & m55<., by(v001 v002 v003 bidx)
```

You want the youngest child for each mother, so bidx must be included in the "by()". Please let us know if this works.
