Following is a response from DHS staff member, Tom Pullum:

I spent some time on this but gave up. I can see why you are puzzled.

We do not often post CSPro code, but attached is the CSPro code for all of Chapter 11 in the BF2021 survey. The main thing to look for is how the v414 variables were assigned to the different food groups. That's something that can vary from one survey to another, and is probably the reason why the GitHub code is not working. Please let us know if you figure it out.
