Hi,

I am working with NFHS 5 for my masters dissertation. I am working on women's empowerment and the use of contraceptives. The missing values for questions on wife beating, land ownership are above 80%. I am confused about how I should treat these missing values since I can't drop these variables as they are extremely relevant to my question. My professor asked me not to impute values and dropping all the missing values would result in significant loss of data. Is there any treatment for this?
