Hi Tom,

Thank you for your prompt response.

To clarify, I have not recoded the variable. I am working with the "Individual Recode" dataset ("IAIR7EFL.dta") from the India: DHS, 2019-21 dataset, which I accessed via the DHS Program website:

https://dhsprogram.com/data/dataset/India_Standard-DHS_2020.cfm?flag=1.

While the dataset is labeled as individual data, it only includes information from women respondents. Men's data are contained in a separate file. As a result, I did not perform any recoding related to adults, since this dataset only includes data from women. Additionally, I couldn't locate the variables you mentioned in your previous message. In my dataset, the variable representing hemoglobin levels is coded as v456.

I'm not sure if the above information helps. If you have any idea, please let me know.

I really appreciate your support. Thank you!
