Dear Janet,

Good afternoon

Please I need a clarification:

2. The NGIR7BFL individual recode data set has 41,821 cases of women 15-49 years who were interviewed.

Please can you kindly explain what the 836,420 stands for, if 41,821 is the number of cases?

What do the missing systems imply? Are they missing cases?

Thank you
