Hi,

I would love to determine the exposure-response relationship between heat stress and stillbirth (for single births only) in Kenya, Tanzania and Uganda using DHS-8 (2022) data for Kenya and Tanzania and DHS-2018-19-MIS data for Uganda. My main problem is how do I estimate the exact date of stillbirth (variable p32), including the date, month and year of stillbirth for all single births for use in my analysis.

Best,
Elizabeth.
