Hi Bright, I'm in the same boat that you apparently were - I cannot replicate the Minimum Meal Diversity for Mozambique 2022...
I get 14.2% instead of 14.4% for both breastfeeding and nonbreastfeeding population of 2677...

I noticed that you say: I was able to replicate nt_mdd (minimum dietary diversity) for (1) breast-fed, (2) non-breastfed and (3) both. Yay!

Would mind sharing how you managed it? I'm completely flummoxed and wondering about v141d (insects) and v414wa (leaves etc)... but I simply do not match and it has become pure trial and error!

I'd be very grateful for your help. Not sure if you are still working on this survey, I'd be happy to share my (working) code with you. :)
Optimistically,
Simon
