I'm bumping this message because I have encountered the same problem. In the Rwanda DHS HR recode for 2005, it appears that only 11 districts are sampled, and they are classified based on numbers 1:11. The counts do not align with the previous provinces. This information is rather useless without a district label. Requesting that DHS provide the labels corresponding to each district ASAP. And no, I prefer not to use the GIS data to do this, since the GIS jittering will misplace some households into different districts, and every other full DHS survey that follows has proper labeling in the district variables.
