Dear all,

I have some questions regarding the Men's data set of the 2015 Colombia Report:

- What is the difference between Psychological and Emotional violence in this Data set?
- Which indicators have been used to construct the Emotional violence variable? I noticed that Men's Data set doesn't contain the variable dm104 ("ever experienced emotional violence"). Moreover, some relevant questions that according the report are indicators for psychological violence ("ever been humiliated by partner" - dm103a /ever been threatened" - dm103b) have not been asked to men, so how have these elements been coded/merged together?

Thank you for your help!

Lia
