---

I recently downloaded the NFHS 5 India 2019-2021 dataset from the DHS Program website. However, I am unable to access the files on multiple devices, including my laptop and those of my fellow members.

The issues are as follows:

The files do not appear on the screen after downloading.

PDF files show as corrupted when attempting to open them.

DTA files (Stata format) are missing icons and cannot be accessed.

The following error message is displayed for PDF files:

[Adobe Acrobat reader could not open the file because it is either not a supported file type or because the file has been damaged. for example, it was sent as an email attachment and wasn't correctly decoded].

I would appreciate any assistance in resolving this issue. Could there be a problem with the download or the way I download or file format?

Thank you.
