Subject: Biomarkers / Malaria Posted by kalfikirsisay@gmail.com on Fri, 10 Oct 2014 13:32:13 GMT View Forum Message <> Reply to Message

Hi All, I am using Ethiopian DHS2011 data for my analysis involving bimarker data. I tried to see on the DHS recode map that variable HML32 (with subscrips)stands for malaria and bednet uses; neverthless, I couldnot trace out this variable in any of the child, HH, male, HHmemeber, and individual recodes. Can any one help where to find this and other biomrker indicators? Reards,
