Following is a response from Senior DHS staff member, Tom Pullum:

Because of the subsampling for biometry in this survey, about a third of women were not asked these questions. They must be excluded from the denominator. The following Stata lines will match the 13.8% in Table 12.9:

```
use "...BDIR81FL.DTA", clear
```

```
tab1 v744*,m
```

```
gen outcome=0 if v744a<.
```

```
foreach ll in a b c d e {  
  replace outcome=1 if v744`ll'==1  
}
```

```
tab outcome [iweight=v005/1000000]
```

I will alert the staff in charge of STATcompiler that this indicator was omitted. I believe that was just an oversight.
