The feedback is helpful and I appreciate it.

Kindly help me address the following;

1. This study will consider the anaemia tables(data) from 2008, 2014, and 2022. We would be glad if you could help us resolve all challenges or advise us on what to do.
2. Is it appropriate to do a trend or comparison analysis using the KR file in one and the PR file in a different year

Please advise me. Thank you
