oliver-fiala wrote on Fri, 17 January 2025 10:42I am familiarising myself at the moment with the possibility to call spatial boundary files for selected DHS surveys using the API (as described here: <https://api.dhsprogram.com/#/api-geometry.cfm>).

While this works fabulously for some surveys (eg, the suggested example <http://api.dhsprogram.com/rest/dhs/geometry/SN2010DHS> Smash Karts works well, both with QGIS as well as with geospatial tools in Stata), many other surveylds or country codes (eg, BD2014DHS or BD or EG) produce errors with any programme, suggesting there are issues with the geojson. I was wondering if this is a known problem or if I am missing anything?  
I also want the latest update
