I am using the Tanzania 2010 DHS and am trying to use the survey commands in Stata. So, I use the commands I usually use when I want to apply the survey settings in Stata with DHS data:

```
gen weight=hv005/1000000  
svyset hv021 [pweight=weight], strata(hv022)
```

However, when I try to anything that require a test statistic, I get the following message:

"Note: Missing test statistics because of stratum with single sampling unit."

Any help is greatly appreciated
