hi!

I have already extracted the variables and observations necessary for my analysis but I have a problem regarding on matching the sample size on my dataset to the 2013 Final Report (Violence Against Women).

There's actually a variable that measures whether the woman is selected or not for domestic violence module. I tried selecting those who were selected, and unfortunately the number of cases does not match to the 2013 Final Report.

Note: I only do the matching to fully understand how the report was done since I think it would be a great help for our study.

Thank you.
