Hi,

I'm trying to determine what the overlap is between data reported in the microdata files/reports for the Niger DHS 2006 and the survey which was conducted by Measure DHS concurrent with that survey, the Enquête de base du Programme Services de Base Intégrés Niger 2006 (EB-SBI 2006). While the DHS report (FR193) does not refer to the EB-SBI, the EB-SBI report (FR196) does mention the concurrent data collection, as well as that questionnaires and at least some data from the DHS were used for the EB-SBI survey/report. I'm trying to determine whether all responses collected for the EB-SBI are reported in the microdata files for the DHS, or whether additional responses were collected that are not reported in the DHS materials.

Warm Regards,

Jessica Mihalik
