Dear Liz-DHS. One more question, maybe to be referred to Dr. Pullum.
When I execute what the syntax express I got a table but the percentages expressed are instead located at 19 and 20 years.

afm	Freq.	Percent	Cum.
-----+-----			
10	11.159992	0.77	0.77
11	6.016508	0.41	1.18
12	9.945302	0.68	1.87
13	27.479334	1.89	3.76
14	50.596559	3.48	7.24
15	80.935504	5.57	12.80
16	111.12714	7.64	20.45
17	124.129971	8.54	28.98
18	121.885099	8.38	37.37
19	159.949541	11.00	48.37
20	112.759464	7.76	56.12
21	119.70874	8.23	64.36
22	55.087768	3.79	68.15
23	67.350715	4.63	72.78
24	90.994014	6.26	79.04
25	34.253336	2.36	81.39
26	21.04997	1.45	82.84
27	16.490187	1.13	83.98
28	6.711959	0.46	84.44
29	.498598	0.03	84.47
.	225.767118	15.53	100.00
-----+-----			
Total	1,453.8968	100.00	

Is there a way that the median age has an error in its calculation?
