I'm working with a few surveys from phase I of the DHS and was wondering how to coded in STATA for weights. I'm specifically looking at Egypt 1988 right now. There is no v021 or v023/v024 variable for primary sampling unit or sample domain.

I've been coding other phases as the following:
gen psu = v021
gen strata = v023
gen weight1 = v005 / 1000000
svyset psu [pweight = weight1], strata(strata)

Any recommendations?
