Dear forum users,

I have been trying to replicate the perinatal mortality rates for Nepal DHS 2011 (Table 8.4, page 117-full report). I went through the guide to DHS and also through the messages posted in the forum. I have explored using both the birth recode file and individual. There are couple of variables s216, sprego that I tried but was unable to come with the answer.

I would be glad to have any insights, suggestions on how to replicate the findings.

Thanks,
