Dear Bill,

Here is a response from Senior Sampling Statistician, Dr. Ruilin Ren:

The Kenya 2008-2009 DHS used the 1999 census frame and urban-rural definition. The final survey report does not have a survey design write up, so I am not sure how the peri-urban was treated. But for most of the countries, peri-urban is classified as rural in the urban-rural setting, so is the Kenya 2014 DHS which used the 2009 census results.

Thanks,  
Sarah-DHS
