Dear User,

Here is a response from our experts, Dr. Hong, Dr. Ren and Mr. Amadou Sow:

1. DV module was administered in 50% of the households interviewed

	result of household selected   household for domestic violence   interview module   completed	Total
household not selected	9,086	9,086
household selected	9,085	9,085
-----+-----+-----		
Total	18,171	18,171

2. In those households, if there is one or more eligible women, one woman was selected to be interviewed for DV module.

3. In 2,121 of those 9,085 households, there is no eligible women (15-49). Therefore only  $9,085 - 2,121 = 6,964$  women were selected for DV interview.

number of eligible women in	household selected for domestic violence module	household   household   household	Total
0	1,934	2,121	4,055
1	5,277	5,229	10,506
2	1,360	1,254	2,614
3	389	347	736
4	91	89	180
5	21	34	55
6	11	7	18
7	2	3	5
8	1	0	1
9	0	1	1
-----+-----+-----			
Total	9,086	9,085	18,171

display 9085-2121  
6964

4. Factor in the overall women response rate of 98.6% and response rate for DV, subtract the lack of privacy => 6,811
