Hello,

I was wondering if the above correction was made and, if so, when was the updated dataset released?

I downloaded the India 1992-3 DHS survey in the fall of 2013, and the variable S113 only has 1,604 non-missing observations out of the 89,777 individual respondents.

Should I make the above adjustments to age at first marriage or is V511 now reliable?

Thank you,
Paola Suarez
