Hello:

When the 2003 Ghana survey datasets(recode file) and the 2003 Ghana GPS datasets are merged using their cluster numbers (v001 in survey data and DHSCLUST in GPS data), neither ADM1NAME nor DHSREGNA in the GPS data matches v024(the country specific region) in the survey data(recode file). There are no such problems in all other years except 2003. Can you please confirm if you have the correct GPS file posted for 2003?

Thank you.
