Before we can answer this questions, we need some more information from you.  
Please give us the dataset "names" for the two data sets you are trying to merge:  
The geographic data for 2003 is named GHGE4bFL  
The household recode data for 2003 is named GHHR4bDT (.. ending wwith DT if youare a STATA user).

Which files are you trying to use to make the merge?

My check of the data shows that merge of the geographic file with the HR, PR, and KR files works correctly and v024 matchs DHSREGNA.
