Subject: Re: Definition of country-specific variables
Posted by user-rhs on Thu, 30 Apr 2015 21:34:05 GMT

Country-specific variables are described in the .doc file that comes in with your individual recode dataset zip file. For example, for the Indonesia 2012 data, the file IDIR62FL.DOC inside the IDIR62DT.ZIP file (for the Stata data) tells you country-specific variables as well as country-specific coding of these variables. In addition, the FRQ file also in the zip has frequencies of all the variables in the dataset.
