For the 2008 and 2013 Nigerian PR files, there were different parameters for collecting birth certification data. For 2013:

HV140 Member has a birth certificate
0 Neither certificate or registered
1 Has certificate
2 Registered
8 Don't know
(m) 9 Missing
(na) Not ap

For 2008 they did not ask this question, but only recorded if a birth certificate was seen: var SH33A

Was the sample, in 2008, for variable SH33A, all women who reported being registered (i.e. equivalent to HV140=2, in 2013)?
Thank you!
