Hi

i am trying to agree the maternal mortality ratio for a series of country but will use ethiopia 2011 as an example, has anyone been able to agree the age adjusted GFR as given in table 15. 3, which is given as 169

i would also like to be able to agree the age adjusted mortality rates, as both of these figures are used in the calcuation of maternal mortality ratios

i am using stat 12 so any programs would be great thanks
