Hi,

I am trying to see the determinants of exclusive breastfeeding in Armenia using DHS of 2010. For the purpose I used birth recode file of Armenia 2010 DHS. I tried to use variable m39=0 as child exclusively breastfeed but the number does not match with the table no: 12.3. So would you please suggest me how can i get exact result as in table 12.3 for exclusive breastfeed for youngest children of 0-5 months who were born in last 2 years and lives with mother at the time of survey. It would be very easy for if you sent STATA command to calculate it.

Thank you for your support.
