Using the KR data file:

Is the denominator for exclusive breastfeeding:

a. all of the children <6 mo

OR

b. last born children <6 mo (bidx=1)

Are the variables used for tabulating exclusive breastfeeding:

v404 = currently breastfeeding yes/no

v409 to v413d = determine liquid intake

v414a to v414w = determine food intake

Should age be calculated using:

v008 = CMC months for survey date

b3 = CMC months for child birthdate
