Using the KR data file:

Is the denominator for exclusive breastfeeding: a. all of the children <6 mo OR

b. last born children <6 mo (bidx=1)

Are the variables used for tabulating exclusive breastfeeding: v404 = currently breastfeeding yes/no v409 to v413d = determine liquid intake v414a to v414w = determine food intake

Should age be calculated using: v008 = CMC months for survey date b3 = CMC months for child birthdate
