Hi Liz,

Thanks for your previous help. I have another clarification question.
Are the fistula questions inside the "Individual Module"?

Thus far I have been downloading the individual module into Stata by specifying the variables I want when opening the file since the file
has so many variables Stata will not open otherwise. If the fistula questions are in the "Individual Module" I'm not sure how these variables
are coded (so that I can specify them when I open the file in Stata). I have the Recode manual for DHS (http://www.dhsprogram.com/pubs/pdf/DHSG4/Recode6_DHS_22March 2013_DHSG4.pdf) and the fistula question, as far as I can tell, are not mentioned. Therefore I cannot get the variables involved.

Can you tell if the fistula questions are in the "Individual Module" and what the variable names are in the datasets that have fistula questions?
Thanks for all your previous and future help!

Leo
