
Subject: To explore whether season in which survey is conducted brings reporting bias re "usual" DW source

Hi Tom and other panelists,

I'm wanting to explore an assumption that when a questionnaire conducted in country with clear wet and dry season asks "what source of drinking water do members of your household usually use?", reporting bias is introduced based on season in which the question is posed.

I drafted some code for DRC DHS2013-4. It is attached.

Any comments on improvements to be made esp regarding best weights for svy?

Thanks,

Elizabeth
