Hi everyone,

I am looking to create 'groups' out of my sample. Basically I want to make groups of women using 3 different variables which uniquely identify them. Each identifying variable will have around 3-7 sub groups, meaning I will have a total of around 80 groups (80 variations) in total.

Any ideas on stata commands I can use to group women this way? For example create a group of women: 15-20 year old, living in Tigray, with primary education.

Let me know if anyone has any idea! Thanks in advance

Liz
