drogers wrote on Wed, 20 March 2013 15:49I have been unable to reproduce the figures in the Liberia 2011 MIS for households with at least one ITN.

The DHS report shows 68.0% for U5 and 77.4% for pregnant women as % who slept under and ITN among households with at least one ITN. I can't figure out this denominator. As far as I can tell I need to use variable HML10, but it does not seem to be correct.

Is there a variable other than HML10 I should be using to reproduce the DHS figures?

Thanks for any advice out there!

Deirdre
