Hello Senior,

Thank you for the pains in explaining where to locate the SHState variable. I found the SHSTATE variable and I saw that Edo State has the code 250, but I still have a problem. I tried to search for variables carrying the code '250' or SHSTATE or SSTATE in the downloaded 2013 DHS SPSS files for Nigeria but didn't find anything else specific for the states. Do I have to do any other statistical manipulation before I can get the data for my state of interest-Edo out of the dataset provided?.Please, how do I proceed from here to get the state-level variables? I am not too good in statistics but, if I am shown the steps, I can follow.

Someone, please, help show me the steps.

Sorry for bothering you,

Thank you,

Daniel
