Subject: merging children's file and wealth index Posted by avr25 on Mon, 20 Jul 2015 17:00:06 GMT View Forum Message <> Reply to Message

Hi! Does anyone have code in stata to merge the children's file(KR) to the wealth file. I am aware that caseid = whhid + v003 I just don't know how to subtract the last character in caseid to match it to whhid? what command or syntax would be most appropriate?
