Here is a response from one of our data processing specialists, Mr. Noureddine Abderrahim: Quote:V106 is the variable highest level of education of the women interviewed. It is present in the individual woman's file (IR), the births' file (BR), the kids' file (KR), and the couples' file (CR) in case there is a man's interview. The data of the mothers' file are included with the child's data.
