Dear Liz,

Thank you very much for your quick response. I followed the thread that you provided and it was very useful but led me to a new question! I now understand that I need to use the codes in the recode file for the variable vcal1. The vcal1 variable in the Nigeria 2013 dataset includes codes "K" and "M," which are not defined in the recode file. How do I find out what these codes mean?

Thank you,

Carie
