Dear Richard,

Indeed the PR file (household members) is in fact also a linked data set where the unit of analysis (the case) is one person in the household schedule and has, if applicable, height and weight and anemia data attached to it. A good place to look if you encounter these complexities is the questionnaire and also very useable is the DHS Guide to Statistics, downloadable from the Measure site at: <http://www.measuredhs.com/publications/publication-dhsg1-dhs-questionnaires-and-manuals.cfm>

Regards,

Han
