Thanks alot for the stata code illustration.

However i am facing a similar trouble.

Firstly i will like to confirm if the "measureage" variable is just the age of all the observations as at the survey date.

Secondly when i impliment the command "svy: reg u1mort...." and try to store the estimate in a global macro i.e `_b[u1mort]` i am told that

`[u1mort]` is not found. I dont know if we just forgot to include a dependent variable in the "svy: reg u1mort...." command

Thanks
