Thank you. Could I be mixing up reports, I can see the dhs/AIS 2003=4 report (<http://dhsprogram.com/pubs/pdf/AIS1/AIS1.pdf>) and then the 2004-5 report link you sent and I am using the 2003-4 dataset, could you please help clarify which one I could use. Like you say the mortality numbers are too high, I just obtained the raw frequencies, didn't calculate anything and that is what is what I have to use unless you advise me otherwise. And yes I merged the HIV data to the 2003-4 survey, however, I wanted to consider only last born children under-5, this variable is much easily selected in 2011-12 dataset but in 2003-4, I find it abit difficult to select these cases. Any help?

Thank you very much,
Malachi
