Hello all, I am Lonkila Zan, working on Burkina Faso 2010 dataset

I used the stat code given by Sarah B and I got exactly the same proportion of amenorehic, abstening ans insusceptible like the Burkina 2010 report.

For the mean and the median of the three variables, I used the calculations explained in the Guide to DHS statistics pages 74-75-76.

But I did not get the same numbers like the report.

Can someone explain me how to procced after the code given by Sarah B.

Thank.
