Subject: Health Statistics narrowed by both region and residence Posted by assumpter on Thu, 24 Sep 2015 18:36:28 GMT

I am new to STAT compiler. I am hoping to gather several health statistics for a project that I'm working on. I need data specific to 'rural' in 'Lusaka District.' As far as I can tell, using STAT compiler can get me numbers for one or the other, but not specific to both. Can anyone give me some advice on how I might get this information?

**Thanks**
