Subject: using svy function to run cross tabs
Posted by pkaburi on Wed, 21 Oct 2015 20:19:55 GMT

I am using KDHS 2008 data. I want to do a ttest for v012 by v761. when i run the following command svy: ttest v012 if v761<=3, over(v761) , i get the following response.

ttest is not supported by svy with vce(linearized.

what should i do?
