---

I am trying to work with PDHS 2012-2013.

I am working with PKIR FILE, I want to create a variable of current child whose under 5 years of age. for which i am using variables v137(no of children under 5 years) and BORD\$1(order of child).

I am confused how to generate this variable that tells me that the child is current and under 5 years of age.

I will be very thankful if any 1 can help me.

Thank you.
