Hello, I am still trying to replicate table 11.1 Nutritional status of children. I have a few more questions;

1. Which variables in data file UGPR60FL.DTA are used to generate;

a) Size at birth

b) Mother's interview status

c) Mother's nutritional status

2. How do you generate "first birth"-under "birth interval in months" using hc63 (preceding birth intervals(months))

Thanks

Gabriel
